

# Features

- Special controller for centralized pressure ventilation of permanent magnet fan. According to the set differential pressure curve to linear control of target pressure.
- Real-time power display, intelligent adjustment of fan opening and speed, energy-efficient way and save electricity cost.
- It supports access to 6 temperature probes and 4 pressure sensors, and can control 60 permanent magnet fans and cooling pad pumps.

- Based on tunnel and ceiling ventilation, multi-level filtration, effectively extend the service life of filter.
- Support import and export information, such as setting parameters and historical data, easily and quickly.

## BH9910 Climate controller

BH9910 climate controller is an intelligent equipment suitable for large-scale pig breeding, which developed for the energy-saving feature of permanent magnet fan. It is designed for ventilation with centralized pressure ventilation.

According to the set differential pressure curve to linear control of target pressure.
